**Pre-Information**

**New rail cover strip for MONORAIL MR**

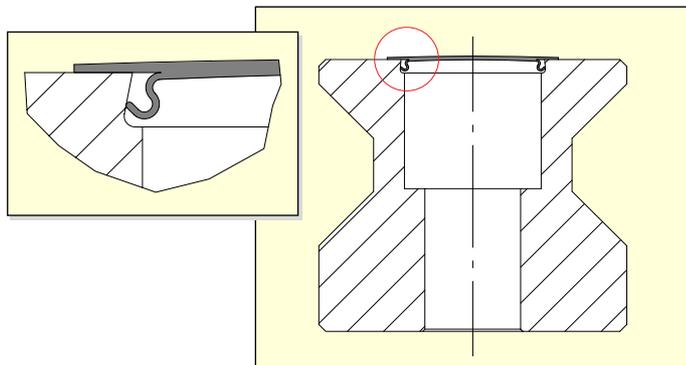

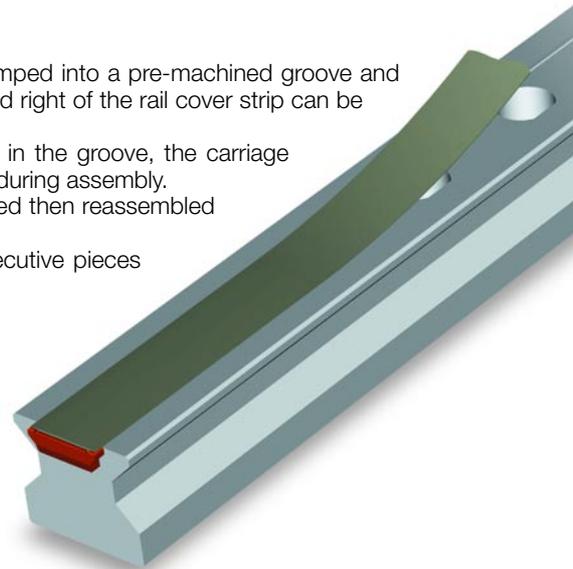

The new rail cover strip from SCHNEEBERGER combines functionality with easy handling and pleasing aesthetics.

**Easy assembly:** The rail cover strip is clamped into a pre-machined groove and fixed. Two ground rail surfaces on the left and right of the rail cover strip can be used as reference surfaces.

Since the attaching holes are located back in the groove, the carriage wipers cannot be damaged by sharp edges during assembly.

If required, the rail cover strip can be removed then reassembled several times.

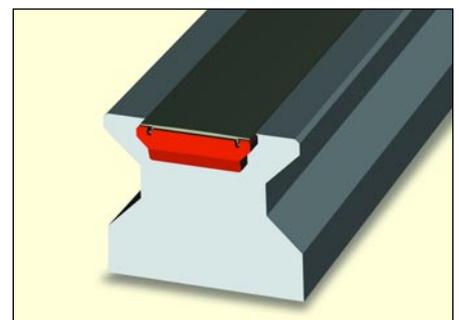

Maximum single piece length is 6 m. Consecutive pieces can be attached to one another.

**Robust and clean:** With the design of the legs shaped as a «S» and the undercut groove, the rail cover strip clings tightly to the rail surface. This combination gives a defined wiper surface.

**Safe closing:** The rail is sealed on both ends with an end-piece which provides additional contamination protection.

Contact SCHNEEBERGER for additional information and availability.
